

## Index Based Volatility Driven

### VOLSHARES LARGE CAP ETF Declares Quarterly Dividend March 12, 2018

Volshares Large Cap ETF, a public reporting, daily NAV ETF (NYSE: [VSL](#)), announced today that its Board of Directors authorized for each class of common stock a dividend of \$0.057 per share. The dividend will be payable to stockholders of record as of the close of business on each day during the period from Feb 22, 2018 to March 12, 2018, prorated for the period of ownership. The dividend reinvestment date will be March 15, 2018 with the payable date being March 15, 2018.

About Volshares Large Cap ETF:

**Volshares Large Cap ETF ([VSL](#))**. The fund takes a unique approach to building its portfolio by looking for companies that exhibit low volatility characteristics, but also demonstrate price momentum that could deliver above average returns. The fund uses the Whitford Model, which analyzes the market sentiment for each company in the starting universe of the 500 largest companies based on the proximity of each company's opening and closing prices to their mean, and its volatility to identify the most attractive securities in terms of their potential for short-term appreciation relative to their expected volatility. More information can be found at [www.volsharsetfs.com](http://www.volsharsetfs.com).

*The Fund's investment objectives, risks, charges and expenses should be considered carefully before investing. For this and other important information, or to obtain a free hard-copy statutory and summary prospectus, please call 484-328-3067. Read it carefully before investing.*

**All investments involve risk. Principal loss is possible. To the extent the Fund invests more heavily in particular industries, groups of industries, or sectors of the economy, its performance will be especially sensitive to developments that significantly affect those industries, groups of industries, or sectors of the economy. The Fund is non-diversified, meaning it may concentrate its assets in fewer individual holdings than a diversified fund. Therefore, the Fund is more exposed to individual stock volatility than a diversified fund. The Fund may trade all or a significant portion of the securities in its portfolio in connection with each weekly reconstitution of its Index. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. The Fund is not actively managed, and the Fund's adviser would not sell shares of an equity security due to current or projected underperformance of a security, industry, or sector, unless that security is removed from the Index or the selling of shares of that security is otherwise required upon a reconstitution of the Index in accordance with the Index methodology. The fund may trade at a premium or discount to NAV. Shares of any ETF are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns.**
